Introducing our Harvest Insight fuel inventory management system

A measure of efficiency

Fact Sheet
Harvest Insight Fuel Inventory Management System

Harvest Insight has been designed to centralise fuel management requirements into one simple and easy-to-use place, ensuring customer stock levels are accurately monitored and managed.

FEATURES & BENEFITS

- Harvest Energy is a secure online system that allows for accurate and efficient management of fuel stock levels, and automates the re-fuelling process.

- The system can be linked into almost any front or back office system, giving greater transparency through hassle-free interface.

- KPIs are monitored and generated on a monthly basis, and the system evaluates any fluctuations as a result of theft, spillages and/or variances between pump and tank sales.

- Harvest Insight allows customers to plan deliveries in a smarter way and provides opportunities to increase business with their customers.

- The system can provide an audit trail through tracking capabilities, which allows for improved customer service scheduling and billing options.

- The system allows close budgetary management, taking into account any seasonal fluctuations or fuel reconciliation issues.

- The system promotes sustainability and good Corporate Social Responsibility (CSR) through accurate stock management and forecasting.

- Harvest Insight is already being used by some of the largest petrol forecourt and commercial businesses in the UK, and is fully compatible with leading fuel management systems such as Gilbarco, Triscan, Timeplan, Jigsaw, Merridale, Fairbanks and Suresite.
