

Our new Harvest Insight system provides better accuracy and efficiency for your fuel inventory management.

Managing your inventory is crucial – if you run out of fuel, it costs money. But if you have too much fuel, then you have money unnecessarily tied up. So how do you determine just the right amount of fuel to hold in your inventory?

Our new, secure online Harvest Insight system puts you in control by automatically monitoring and supplying live metrics of your fuel stocks, optimising expenditure, facilitating easy fuel ordering, and delivering greater transparency and efficiency.

The system allows you to plan deliveries in a smarter way to meet set service level agreements, and provides opportunities to increase your business with your customers. The ability to detect theft, fraud, short delivery, stock reconciliation and even assistance with managing your carbon footprint, can all be accomplished.

The system is already being used by some of the largest petrol forecourt and commercial businesses in the UK, and is fully compatible with leading fuel management systems – such as Gilbarco, Triscan, Timeplan, Jigsaw, Merridale, Fairbanks and Suresite – as it has the ability to link into almost any front or back office system.

Harvest Insight provides better accuracy and efficiency for your fuel inventory management.

Make managing your orders and stock easy with our next generation, one-stop software.

Introducing our Harvest Insight fuel inventory management system

A measure of efficiency

Features of Harvest Insight

Harvest Insight has been designed to centralise your fuel management requirements into one simple and easy-to-use place, ensuring that your stock levels are accurately monitored and managed. The system works by storing metrics and information, which can be easily retrieved for analysis via the platform's website, allowing you to streamline data and efficiently place and update orders. Our system not only provides security on wet stock management but also helps you to manage your wet stock requirements as needed.

The system highlights any arising issues for rapid resolution, driving decision-making through the analysis of complete and accurate data on fuel usage, site assets and stock.

Benefits of Harvest Insight

The key benefits of Harvest Insight include:

- Streamlined and efficient management of stock levels, as the system automates the re-fuelling process
- Greater transparency through hassle-free interface with the system
- Optimisation of cash flow and expenditure
- KPIs are monitored and generated by the system on a monthly basis, and the system evaluates any fluctuations as a result of theft, spillages and/or variances between pump and tank sales.

- The system can provide an audit trail through tracking capabilities, which allows for improved customer service scheduling and billing options.
- The system allows close budgetary management, taking into account any seasonal fluctuations or fuel reconciliation issues. Fuel can be bought at a fixed price, thereby eliminating market volatility.
- The system promotes sustainability and good Corporate Social Responsibility (CSR) through accurate stock management and forecasting.
